

TaskMap Tech Note

TaskMap templates missing from Visio New page

Symptom

You select *File>New* on the Visio ribbon and you don't see the TaskMap folder containing the TaskMap templates.

Problem Summary

Visio maintains a list of all folders it knows about that contain Visio templates. The TaskMap installation program normally registers the location of the TaskMap templates so they will appear in this list.

If the TaskMap templates are missing from Visio's list of available templates, it is either because group policy settings prevented the TaskMap installation program from registering the templates or system cleanup functions on your PC have removed these settings from the Windows registry.

Resolution

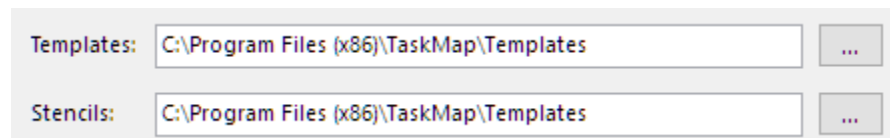

To restore the link to the TaskMap templates folder, perform the following steps:

1. Select *File>Options* on the Visio ribbon.
2. Select the *Advanced* page, scroll to the bottom of the page, and then click the *File Locations* button.
3. Click the browse button ("...") to the right of *Templates*, then navigate to and select this path:

C:\Program Files (x86)\TaskMap\Templates

4. Repeat step 3 for *Stencils*. (You can copy and paste the path name from the *Templates* field to the *Stencils* field, if you prefer.)

On most systems, the result will look like this:

Templates:	C:\Program Files (x86)\TaskMap\Templates	...
Stencils:	C:\Program Files (x86)\TaskMap\Templates	...

5. Click *OK*.
6. Click *OK*.

At this point the TaskMap folder should appear in the list of Visio template folders. If it does not, exit and restart Visio.
